About Me

Full-stack developer with almost 5 years of experience shipping products real customers use. Currently working across React and Ruby on Rails on a client engagement with Revealdata, building document review, search, and export features. I've also taken several products solo from architecture to production, including a multi-tenant SaaS platform, an AI quiz generator on the OpenAI API, and event/photo apps with high-throughput image pipelines (one load-tested to 1,000 uploads/second on minimal infrastructure).

Backend experience spans Node.js, NestJS, GraphQL, PostgreSQL, MongoDB, Redis, and Docker. I'm deepening my Rails skills through structured TDD/RSpec coursework, and I use AI tools daily while staying fully accountable for reviewing and validating what they produce.

Professional Experience

12/2024 – Present
Remote

Full Stack Engineer (Ruby on Rails + React), *Isa Consultin - Revealdata*
Working with an international client on a robust eDiscovery and legal holds platform, focusing on both frontend and backend development. Since taking on this role I've used it as a springboard to expand deliberately into Ruby on Rails, GraphQL, and Docker, while staying current on AI-assisted development tools.
- Building and maintaining core product features using Ruby on Rails and React.
- Contributing to a high-impact legal tech product used across international markets.
- Collaborating closely with cross-functional teams to ensure smooth integration and delivery.
- Continuously expanding Rails expertise through applied project work and structured Udemy coursework, positioning myself for long-term growth in modern full-stack development.
- Learning Docker to containerize and streamline application environments.
- Studying GraphQL and how it integrates with Node.js to design more flexible APIs.
- Exploring AI-assisted development tools and workflows to improve code quality and delivery speed.

Ice Software

01/2025 – 04/2025
Remote

Software Developer (Part-time)
Initially hired full-time to lead critical improvements across our microservices architecture, I transitioned to a part-time role to continue supporting key projects and ensure a smooth knowledge transfer while pursuing new opportunities

04/2024 – 12/2024
Prishtina, Kosovo

Software Developer
Led initiatives to optimize and enhance our microservices architecture, continuously improving efficiency and scalability.
- Developing scalable microservices with NATS for low-latency messaging and rapid scaling.
- Creating an in-memory storage solution that tripled performance.
- Building a refund feature to improve user trust and transparency.
- Enhancing data handling and caching with Redis, SQLite, and MySQL.
- Mentoring interns to ensure smooth team integration.

11/2022 – 03/2024
Prishtina, Kosovo

Software Developer, *Appbites*
- Specialized in Node.js, leading backend initiatives with NestJS to enhance application performance and support flexible, scalable solutions.
- Developing scalable backend services with Node.js and NestJS.
- AWS Integration: Implemented Amazon S3 for file storage and Amazon Personalize for tailored video recommendations.
- Database Management: Utilized MongoDB with Prisma for efficient data management.
- Real-Time Chat with socket.io : Created interactive user-to-user and group chat with indicators.
- Leadership in Case Management: Led backend database design and use cases, enhancing legal case management.
- Documentation and Mentorship: Created API documentation with Swagger and mentored junior developers.

Projects

Festsnap , *Done*
Designed and built a full-stack SaaS platform that lets event guests contribute photos to a shared gallery via a simple upload form (photo + optional name/message), giving event owners a centralized, privacy-protected collection of every moment from their event.

- **Dual onboarding funnels:** self-serve signup with a 4-week free trial, plus a B2B flow enabling venues and restaurants to provision events on behalf of clients, who receive an extended 8-week Pro plan.
- **Owner-centric gallery management:** bulk download of all photos, album organization, and one-click PDF export for offline sharing or printing.
- **Privacy-first architecture:** uploaded images are scoped exclusively to the event owner; no guest, B2B partner, or admin account has access to uploaded content.

- **Scalable media pipeline:** decoupled microservices handle image ingestion and processing asynchronously, keeping upload traffic isolated from the core app.
- **Performance validated:** load-tested to sustain 1,000 concurrent uploads/second on a 4GB RAM production server, with stable throughput and no dropped requests.
- **Stack:** Next.js (frontend/API), PostgreSQL (relational data), AWS S3 (media storage), containerized microservices (image processing pipeline).

Valley Festival , *Done*

Built the official multi-language website for an international film festival held in the Presevo Valley, serving as the event's public program and archive hub.

- **Multilingual delivery:** full site available in English, Albanian, and Serbian with locale-based routing.
- **Dynamic program & schedule:** complete film lineup with metadata (runtime, genre, director, country of origin) alongside a day-by-day schedule filterable by venue and event type (screenings vs. workshops).
- **Guest showcase:** dedicated section profiling jury members, hosts, and featured guests with photos and roles.
- **Event gallery & partners:** photo gallery of festival moments and a partners/sponsors section.
- **Content-driven architecture:** structured to support year-over-year editions (e.g., /festival/2026) with reusable templates for program, schedule, and guest data.
- **Stack:** Next.js, with locale-based i18n routing and an internal upload API for gallery assets.

AI Quiz Generator, *In Progress*

Building an AI-powered quiz generation platform that creates quizzes on demand, supporting two distinct modes of use.

- **Real-time mode:** generates quiz questions on the fly during a live session, enabling dynamic, interactive quiz experiences.
- **Standard mode:** generates a complete quiz set upfront for traditional, self-paced quiz-taking.
- **AI-driven content generation:** leverages the OpenAI API to produce contextually relevant questions, answer options, and (where applicable) explanations from a given topic or input.
- **Stack:** Next.js (frontend/API layer), OpenAI API (question generation engine).

Key Achievements

- Improved backend performance by 3x through optimized in-memory data handling
- Delivered a production-ready refund feature that improved user trust and system transparency
- Built and maintained scalable APIs used in live production environments
- Increased development efficiency through clear API documentation and structured architecture

Skills

Core Stack
Ruby, Ruby on Rails, React, JavaScript, TypeScript

Backend
Rails (controllers, REST APIs, RSpec), PostgreSQL, MySQL, MongoDB, Redis

Architecture
GraphQL, Sockets, Microservices, REST API

Frontend
React, React Hook Form, Context API, component architecture

Tools & Systems
Git, Docker, CI/CD, AWS (S3, Personalize), NATS

Soft Skills
Adaptive, Problem solver, Team player, Effective communicator, Quick learner

Education & Certifications

2025	**Ruby on Rails,** *Udemy*
08/2025	**Learn to Code with Ruby,** *Udemy*
2025	**Docker Fundamentals,** *Udemy*
12/2025 – 12/2025	**GraphQL,** *Udemy*
2025	**AI Tools for Developers,** *Udemy, frontendtmaster*
04/2024 Pristina, Kosovo	**ReactJS Development,** *Innovation Center Kosovo*
03/2024	**The Ultimate MySQL Bootcamp,** *Udemy*
12/2022	**Node.js, Express, MongoDB & More,** *Udemy*
2016 – 2020 Samsun, Turkey	**Bachelor / Computer Engineering,** *Ondokuz Mayis University*
